Schließanlagen GmbH Pfaffenhain – Quality products made in Saxony

Because Schließanlagen GmbH Pfaffenhain specialised many years back in sophisticated lock and security system manufacture, it now has an excellent reputation all around the world. Reference projects like the 7 star hotel “Burj Al Arab” in Dubai are genuine proof of that. Behind these successes, the Saxony based company is the only manufacturer world-wide to produce door cylinder cores with a diameter of 14 mm.

Usual cores for door cylinders have a 13 mm diameter. By optimising the construction of the cylinders, the diameter of the core had been successfully enlarged to 14 mm. The most important advantage: Using this supplementary 1 mm, the company is able to produce locking systems providing the highest level of precision and technology. The core diameter of 14 mm makes it possible to employ pins which are 1 mm longer than those used with comparable products. The changed geometry leads to a better guidance of the pins in the tumblers and avoids the wear and tear effect.

This special characteristic of construction, the variety of articles and the flexible manufacturing of different cylinders are the reasons for the excellent reputation of Schließanlagen GmbH Pfaffenhain. The company's own electroplating workshop and the sophisticated key manufacturing centres ensure a very fast run of production.

The variety of locks offered satisfies all needs: from high quality single cylinders to locking systems containing 10,000 cylinders.

In addition, Schließanlagen GmbH Pfaffenhain has very flexible production. Thanks to state of the art equipment, the highly skilled workers and engineers are in a position to fulfil any individual requirements - proven by their many national and international security contracts. For example Pfaffenhain cylinders are the specified choice in the following buildings:

- Humboldt-University, Berlin
- Aeroport Berlin Schönefeld
- Burj Al Arab, Dubai
- Factory site of Ferrari, Maranello
- New Parliament, London
